Upcoming public IPv4 address charge

Starting on May 1, 2024, all new and existing Lightsail instances that include a public IPv4 address will be subject to our revised pricing. IPv6-only instances are now available for workloads that do not require a public IPv4 address.

## Node.js-1

Detach this static IP?

The **StaticIp-1** static IP is attached to this instance

If you detach it, the public IP address for the instance will change and could disrupt traffic.

No, cancel

Yes, detach

You can register a domain, or create a DNS zone for a registered domain.

Create DNS zone

Register domain

DNS zones

A DNS zone contains the domain name system (DNS) records for your domain. By creating a DNS zone, you can easily map your registered domain and its subdomains to your Lightsail resources. If you have a domain registered elsewhere, you can add it to Lightsail by creating a DNS zone.

Registered domains

Use Lightsail to register a new domain with Amazon Route 53. After you register your domain name, Lightsail automatically creates a DNS zone that has the same name as the domain.
